Patient Instructions for Pre-Surgery Covid-19 Testing
Rapid Detection of SARS Covid-2

Per the Illinois Department of Public Health (IDPH), we are required to test you if you have not received the Covid 19 vaccine or it has not been 2 weeks since you completed the vaccine series.

We need to perform this test on the day of your surgery. If it is positive, (will know within 15 minutes of the test), your procedure will be cancelled and rescheduled.

You are not allowed to enter the surgery center until AFTER you have received the results of the Covid-19 test.

Please bring your insurance card and picture ID (preferably a drivers' license)

This test requires a staff member to swab your nasal passages. We perform the test on-site

*The Uropartners Surgery Center Covid-19 testing is a 'drive-up' testing center. It is **ONLY** for patients having surgery at our surgery center. It is not for family or friends.*

If you are not vaccinated and need to have a rapid Covid test, the Pre-op Nurse will give you an arrival time the day before your procedure.

1. Please drive under the awning and press the doorbell.
2. Within a minute, the Uropartners Surgery Center staff member will come out, take your insurance card and photo ID to make a copy. You will also be asked to sign a consent for this Covid-19 testing.

A positive result will cause the surgery center to postpone your surgery until you are two weeks post the Covid 19 vaccine series or have two (2) negative Covid-19 tests following treatment and being quarantined per your primary care physician treatment plan
